Quality Assurance Plan

In order to ensure the quality of valve products, the following guarantees are made:

- **The guarantee of business qualification:**

We guarantee that the business license provided to your company is genuine and valid.

- **The overall guarantee of the supply of products:**

1. The quality of the products we provide is implemented in accordance with the technical standards prescribed by the buyer. When the buyer does not have the technical standards prescribed by the buyer, our company will implement them in accordance with the current national standards and provide the buyer with samples

Beijing Jingyi Liye Valve Co., Ltd.

of the products. With the buyer's consent, we will supply the products and ensure the stability of the product quality.

2. All the products supplied are qualified with "Product Quality Testing Report" and relevant product certificates, which conform to the relevant provisions of the state.

3. For the products that have passed the acceptance, before your company put into use, if there are quality problems, we guarantee unconditional return of the goods and replenish the qualified products within the prescribed time.

● **Quality Assurance of Product Production**

1. We make detailed production plan according to the project delivery plan, and carry out production materials in strict accordance with national standards and technical design requirements;

2. Production shall be carried out in strict accordance with the ISO 9001 management system; project production and quality

management teams will be set up to supervise and evaluate production tasks.

3. Supervise and evaluate the production process in each link, correct the quality problems in time, and ensure the balance and stability of product quality;

4. Record and count the production process to ensure the traceability of the production quality process.

● **Quality Assurance in Material Purchasing**

1. Make purchasing plan according to production plan. Purchase and inspection of spare parts and materials are carried out in strict accordance with ISO 9001 standard process.

2. The purchased materials must be verified by quality engineers before they can be executed; ensure that the purchased materials

meet the technical design standards and production quality requirements of the products;

3. Strictly inspection of the purchased materials inwards the factory.

All raw materials and spare parts should be inspected in the warehouse, so that the quality can be traced back.

- **Quality Assurance of Major Production Equipment and Testing Equipment**

1. Strictly install ISO 9001 management system, regularly inspect production equipment and testing equipment;

2. Specialized personnel are appointed to carry out regular testing of equipment and make corresponding testing records.

3. Maintain and replace equipment regularly.
